

PIVOT POINT CONSULTING & LOGISTICS

Sustainable Value Chains • Clean Energy Integration • Climate-Smart Logistics

Phone: +254 799 919 163 **Location:** Nairobi / Kisumu, Kenya **Entity:** Advisory & Operational Enterprise

EXECUTIVE OVERVIEW

Pivot Point Consulting and Logistics is a premier Kenyan advisory and operations enterprise committed to advancing sustainable development through circular economy business models, clean energy integration, and climate-aligned logistics. We partner with agribusinesses, non-profit institutions, social enterprises, and local communities to design resilient supply chains, perform rigorous market research, and deploy technology-driven field operations.

KEY OPERATIONAL CHALLENGE CURRENTLY FACING OUR BUSINESS

CURRENT CHALLENGE: SCALING COLD-CHAIN & CLEAN ENERGY LAST-MILE LOGISTICS INFRASTRUCTURE

While Pivot Point Consulting and Logistics has successfully engineered circular business models and integrated solar energy solutions for agricultural partners across Western Kenya and Nairobi, our primary growth constraint is securing targeted capital and equipment financing to acquire specialized cold-chain logistics hardware (such as mobile solar-refrigerated transport units).

This hardware gap creates a critical bottleneck in expanding our last-mile logistics operations for perishable high-value produce, preventing us from fully mitigating post-harvest losses for smallholder farmers during transit to urban centers. Bridging this capital requirement will enable us to double our logistics capacity, enhance rural-urban linkages, and fully scale our zero-emission agricultural transport network.

CORE COMPETENCIES & SERVICES

SUSTAINABILITY & ENERGY

1. Clean Energy Solutions & Climate Policy

Advising rural enterprises on clean energy transitions, solar power integration for incubation and post-harvest handling, energy efficiency audits, and alignment with national climate policy and circular economy frameworks.

SUPPLY CHAIN

2. Agricultural Value Chain & Field Logistics

Structuring end-to-end sustainable value chains, market linkage strategies, last-mile agricultural input distribution, and climate-resilient transport logistics for high-value agricultural commodities.

TECHNOLOGY & DATA

3. Fintech, IT & Field Data Systems

Integrating digital data collection tools (KoboToolbox, ODK), mobile money workflow automations, relational database management (SQL), and business intelligence dashboards (Power BI, QGIS) for optimized enterprise tracking.

MARKET GROWTH

4. Strategic Marketing & Brand Positioning

Crafting tailored go-to-market strategies, market assessments, customer acquisition models, and targeted promotional campaigns for eco-friendly products and green ventures.

OPERATIONS

5. Event Planning & Project Management

End-to-end planning and execution of technical workshops, corporate conferences, enumerator field onboarding, stakeholder engagement forums, and multi-sector project monitoring.
